Name:Nguyễn Gia Phát

LAB 7

BÀI 1: Xây dựng ứng dụng ASP.NET Core Razor kết nối Database

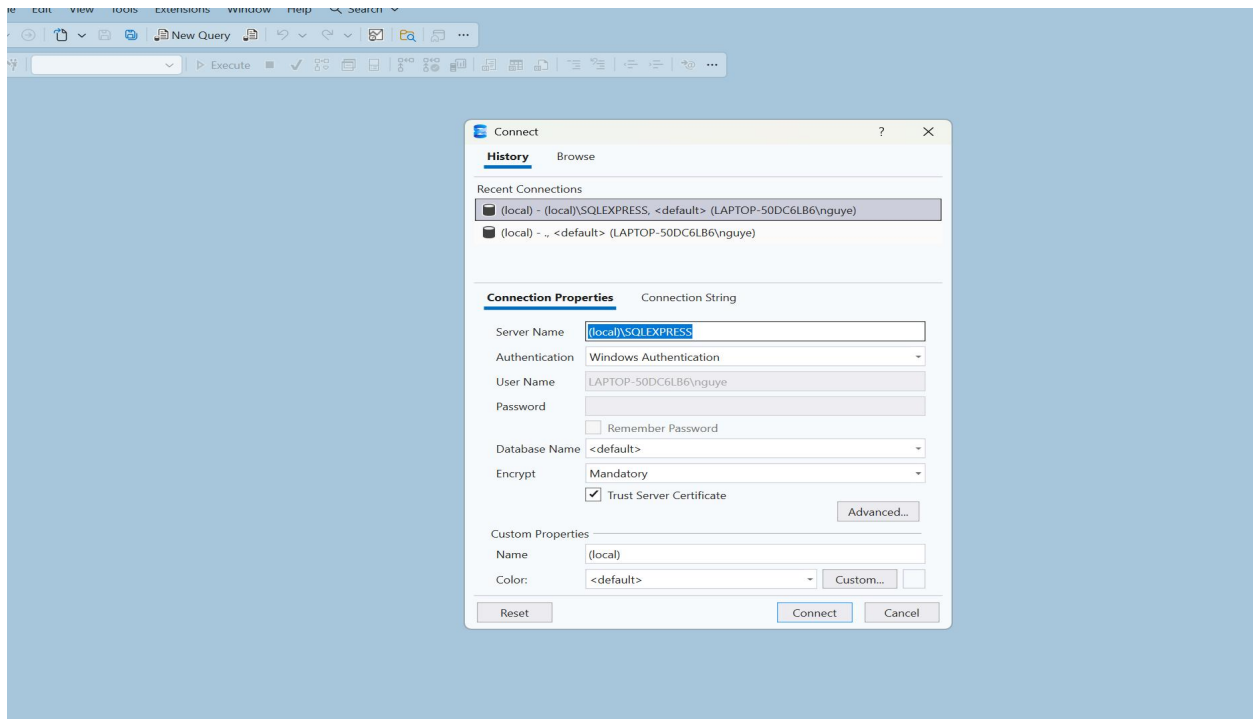

Bước 1: Tạo Project ASP.NET Core

- **Mở Visual Studio**
- **Chọn Create a new project**
- **Chọn ASP.NET Core Web App (Razor Pages)**
- **Đặt tên project: HelloWorld**
- **Nhấn Create**

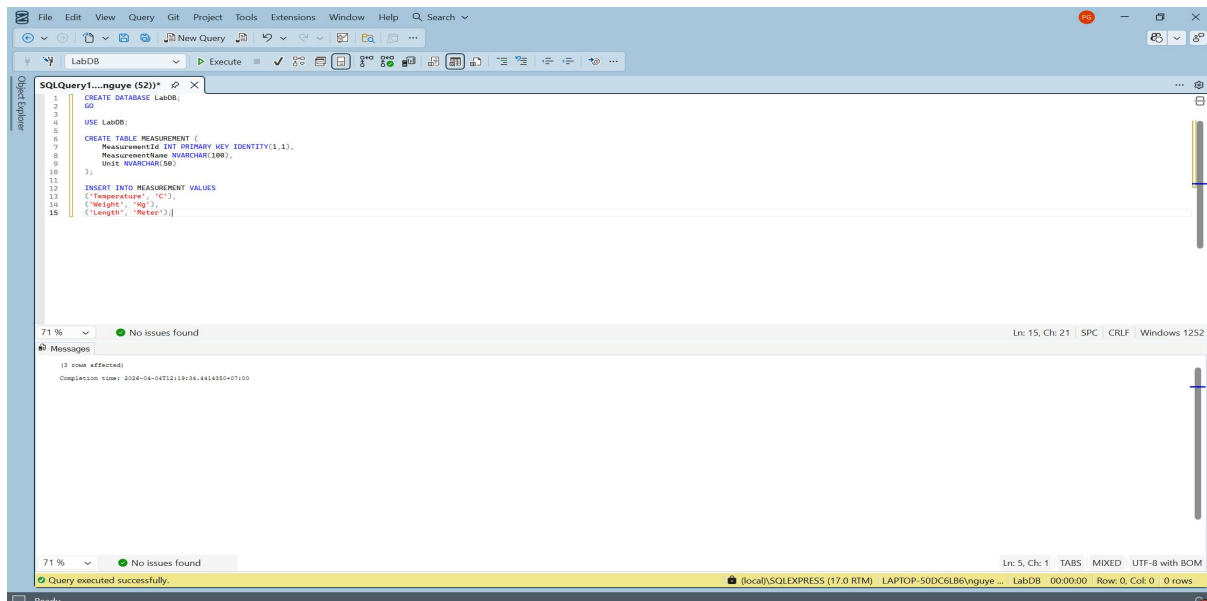

Bước 2: Tạo Database

- Mở SQL Server Management Studio (SSMS)

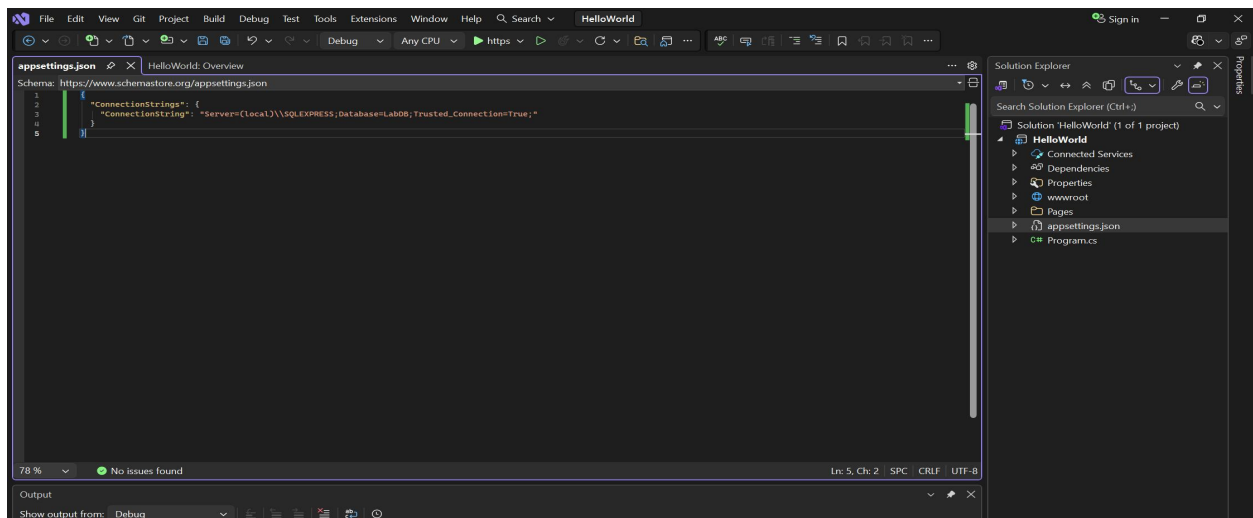

Tạo database bằng lệnh:

Kết quả: Tạo database LabDB và bảng MEASUREMENT.

Bước 3: Kết nối Database

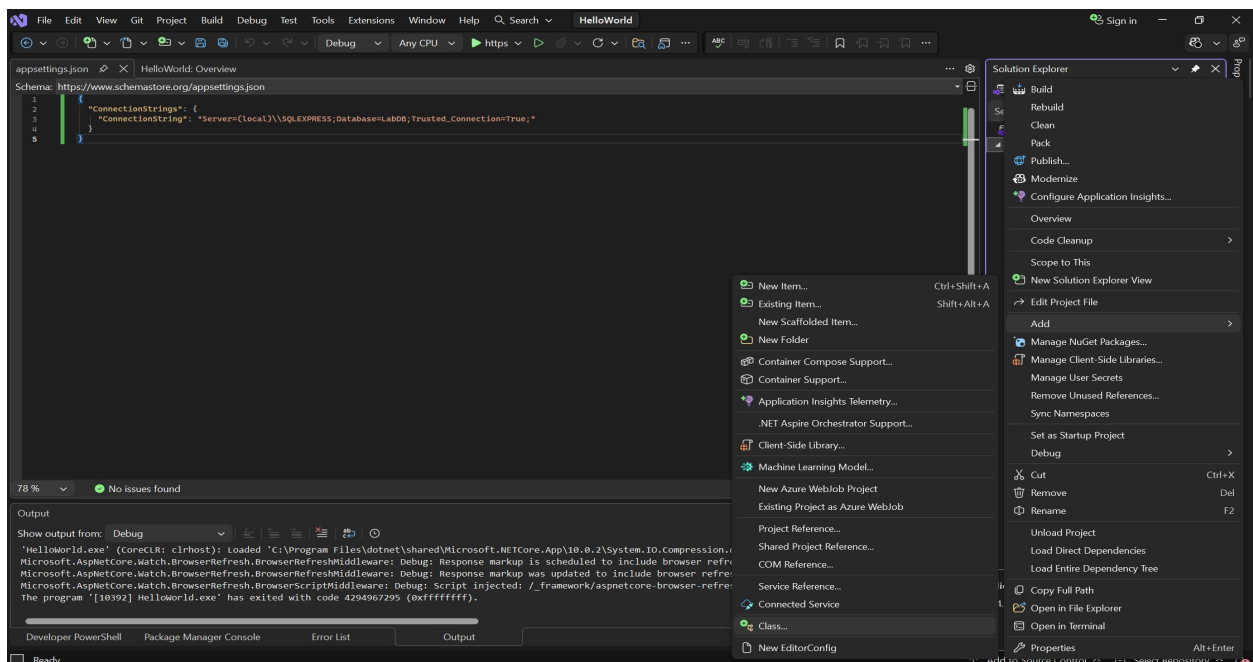

- Mở file appsettings.json
- Thêm connection string:

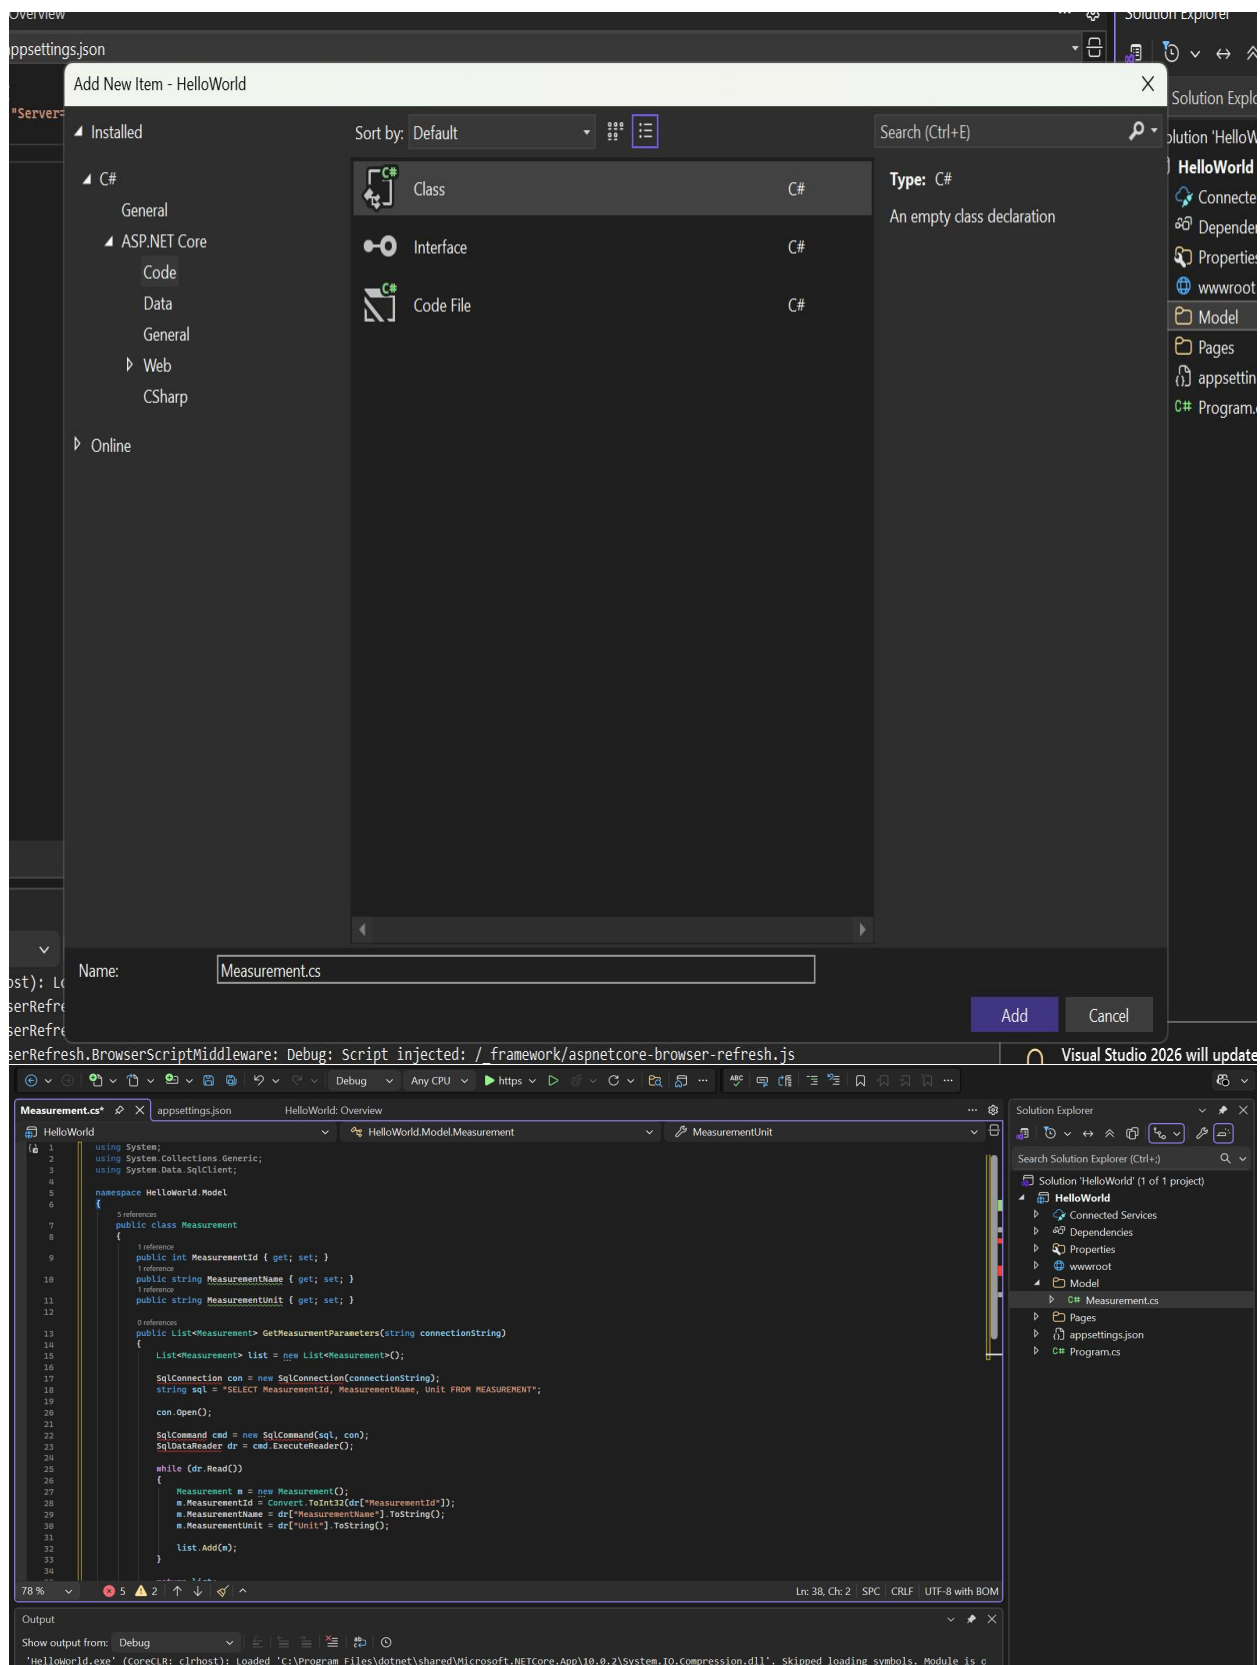

Kết quả: Project kết nối được với SQL Server.

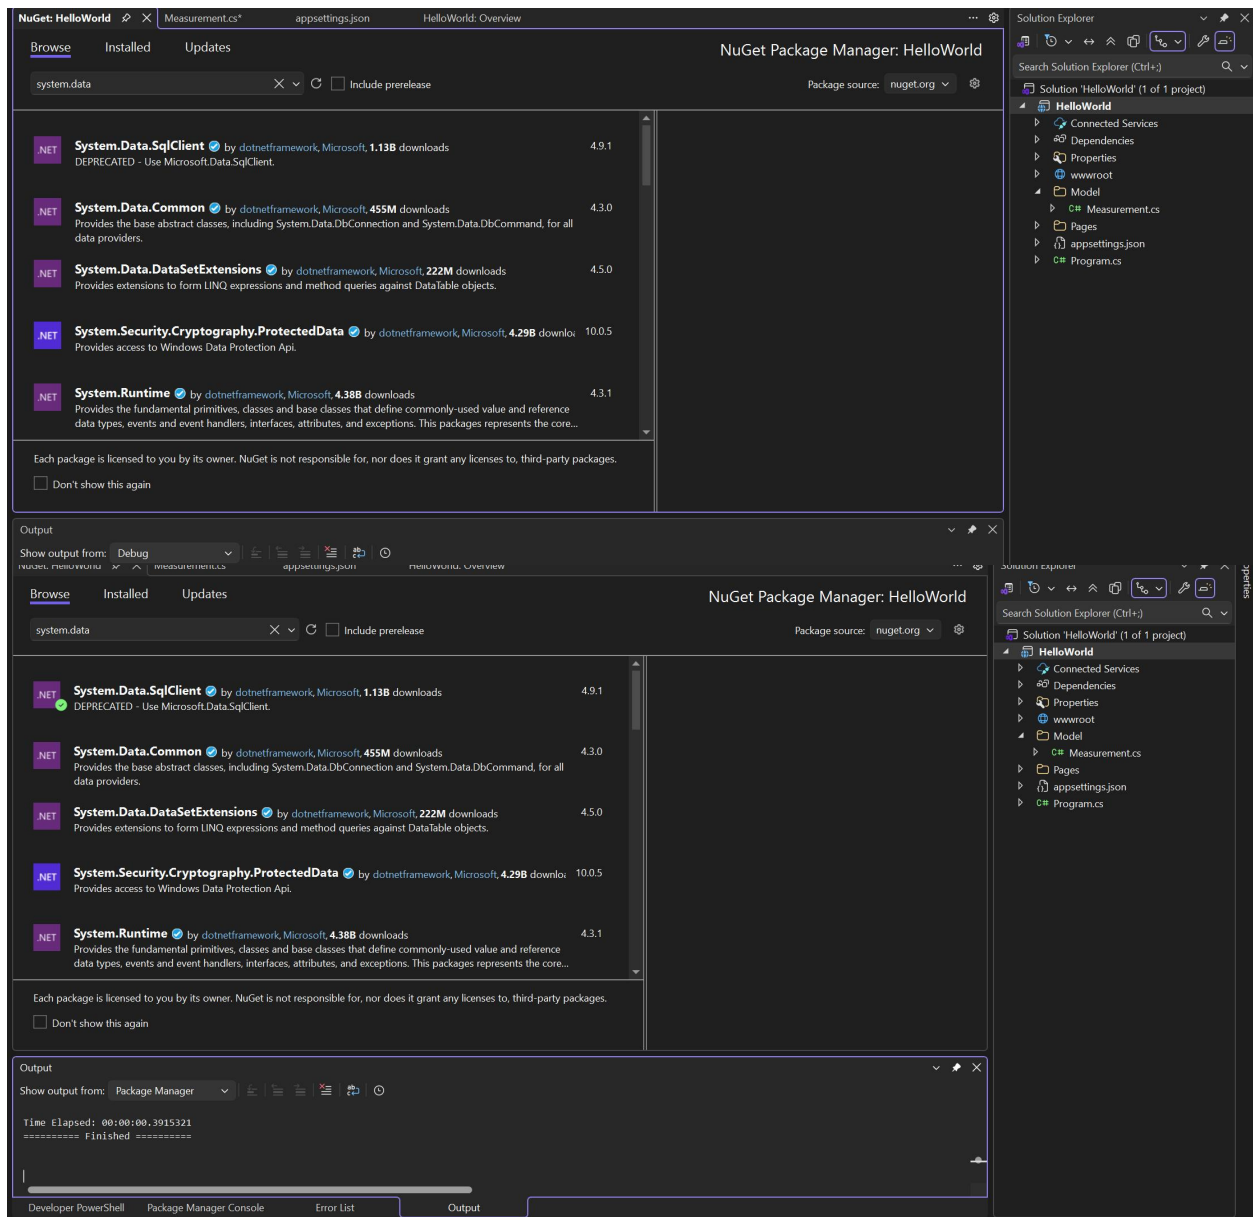

Bước 4: Tạo Model

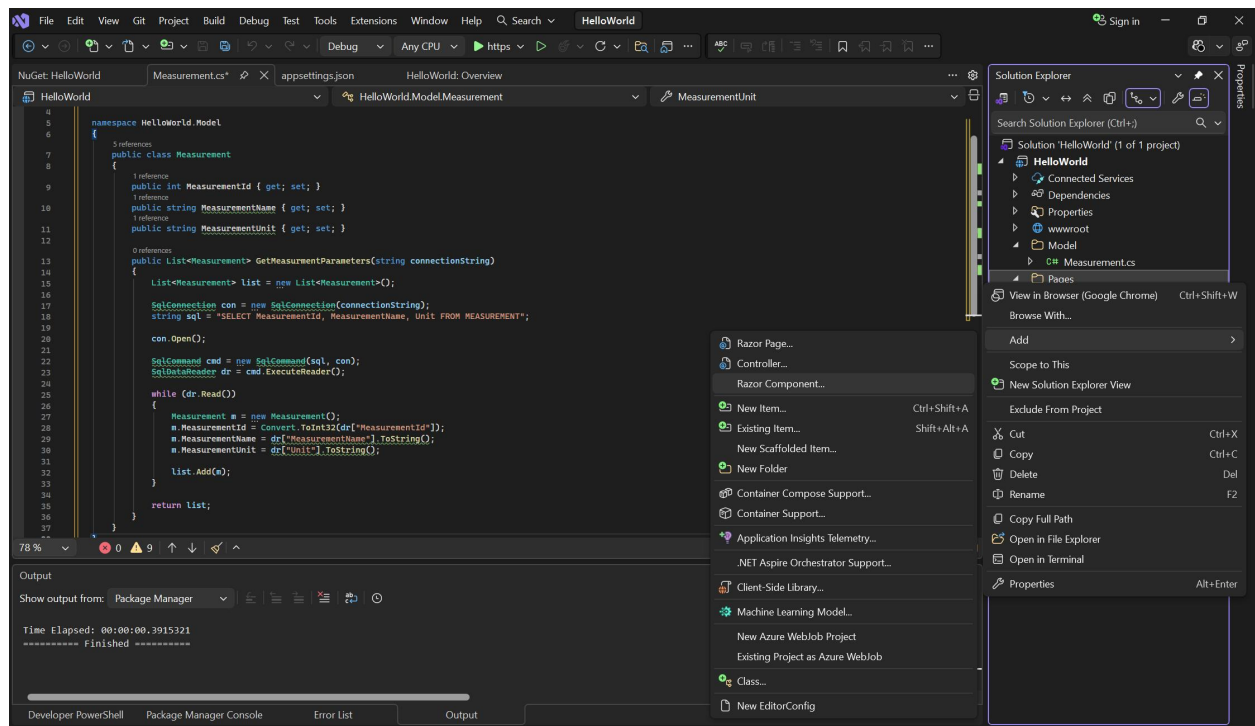

- Chuột phải project → Add → New Folder → đặt tên Model
- Chuột phải folder Model → Add → Class → đặt tên Measurement.cs

Tiếp theo em cài thư viện SQL Client

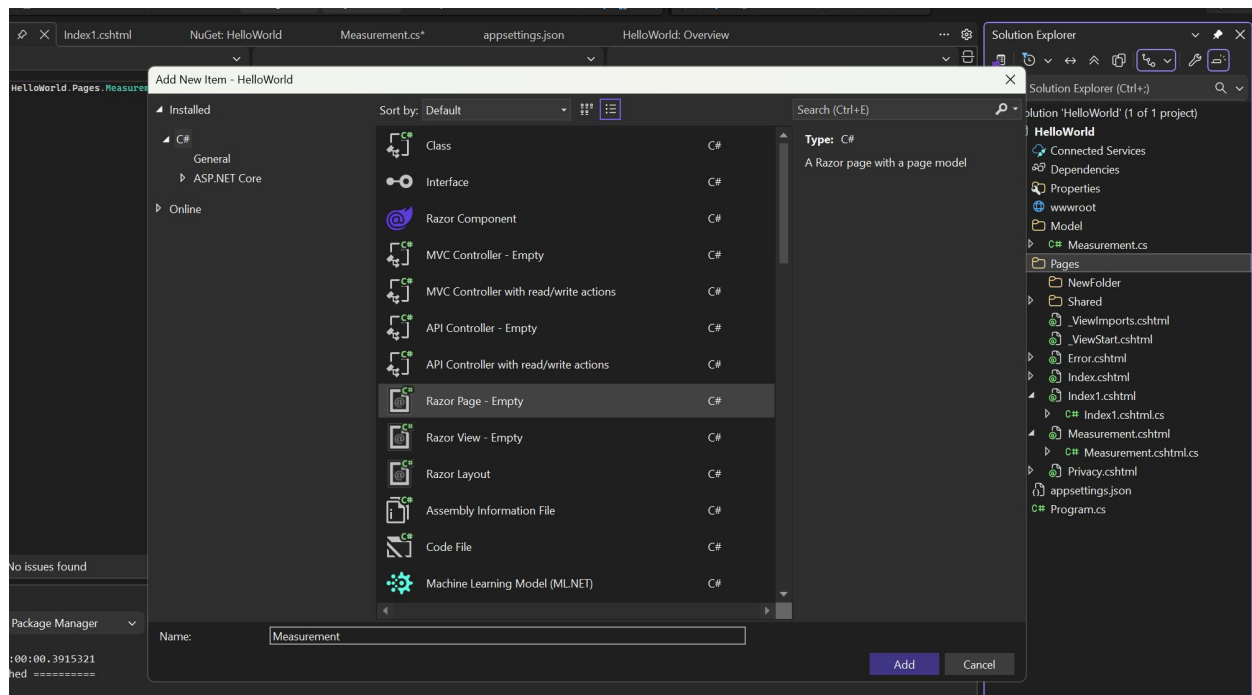

Kết quả: Tạo lớp để truy xuất dữ liệu từ database.

Bước 5: Tạo Razor Page

- Chuột phải thư mục Pages → Add → Razor Page
- Đặt tên: Measurement

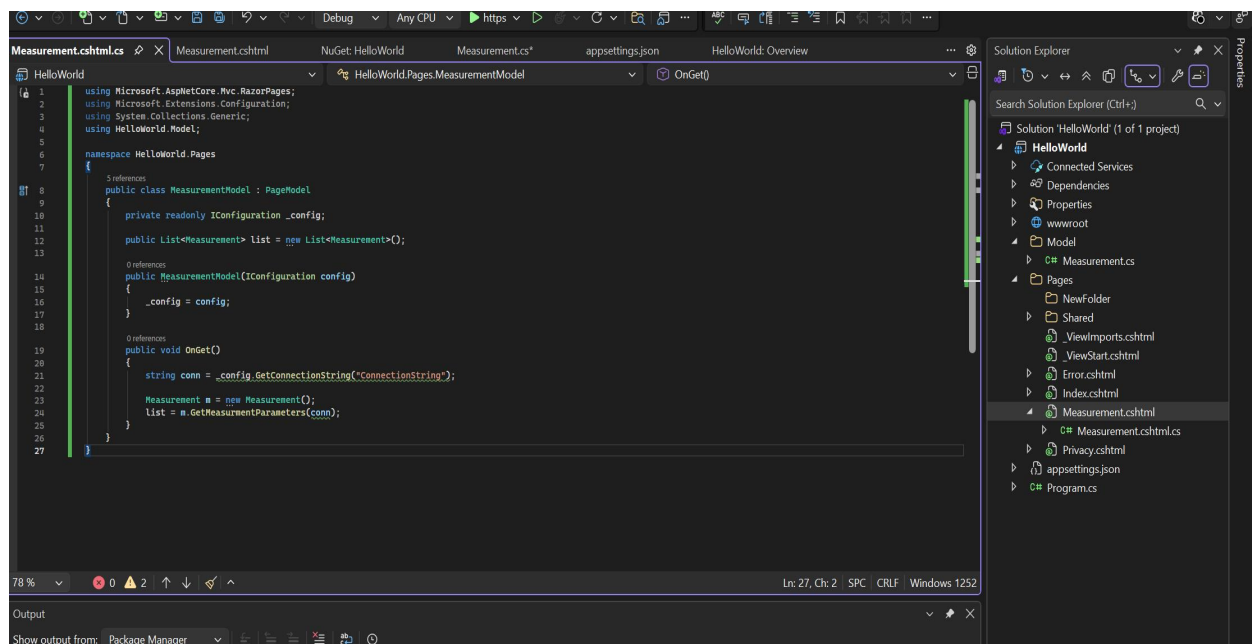

Kết quả: Tạo 2 file:

- Measurement.cshtml
- Measurement.cshtml.cs

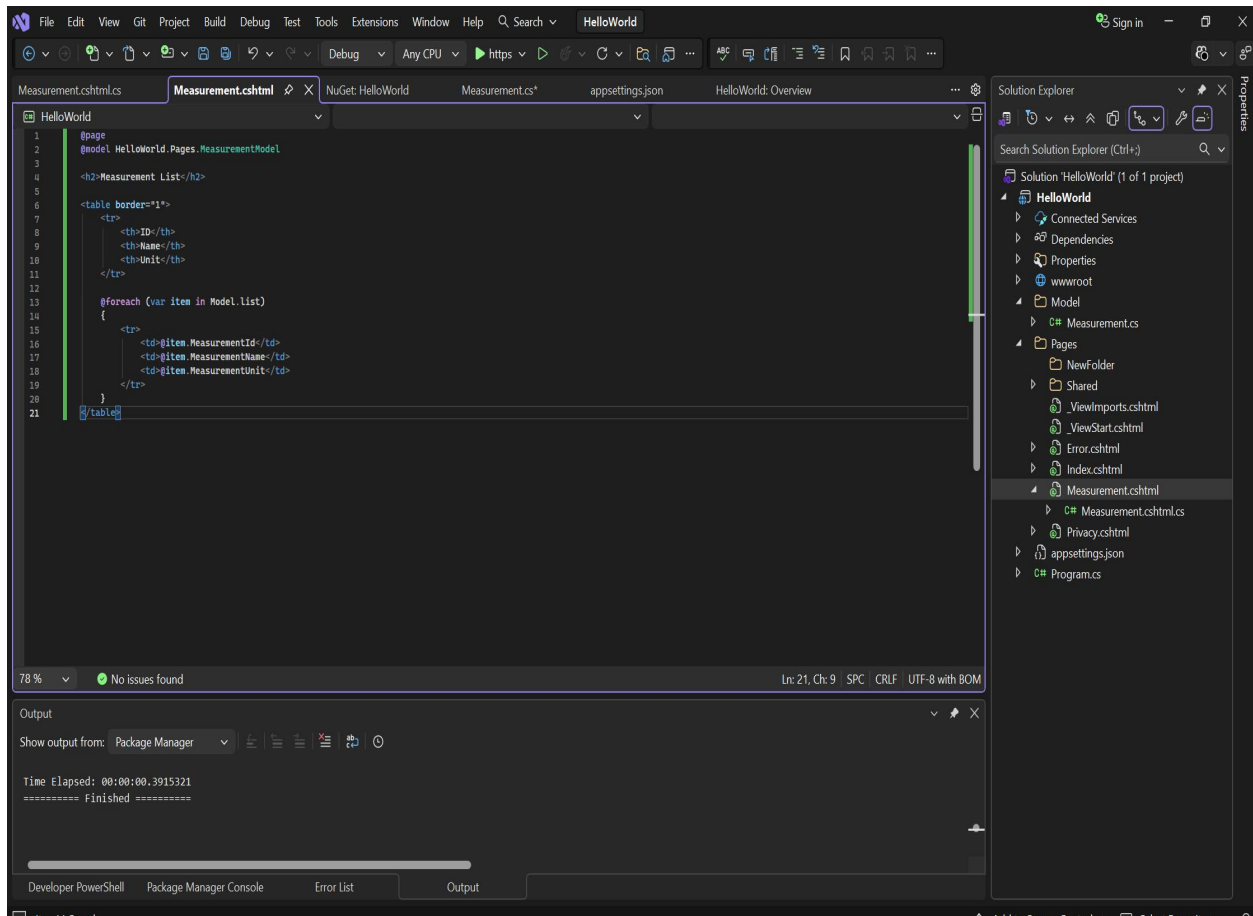

Bước 6: Xử lý dữ liệu (Backend)

- Mở file Measurement.cshtml.cs
- Viết code:

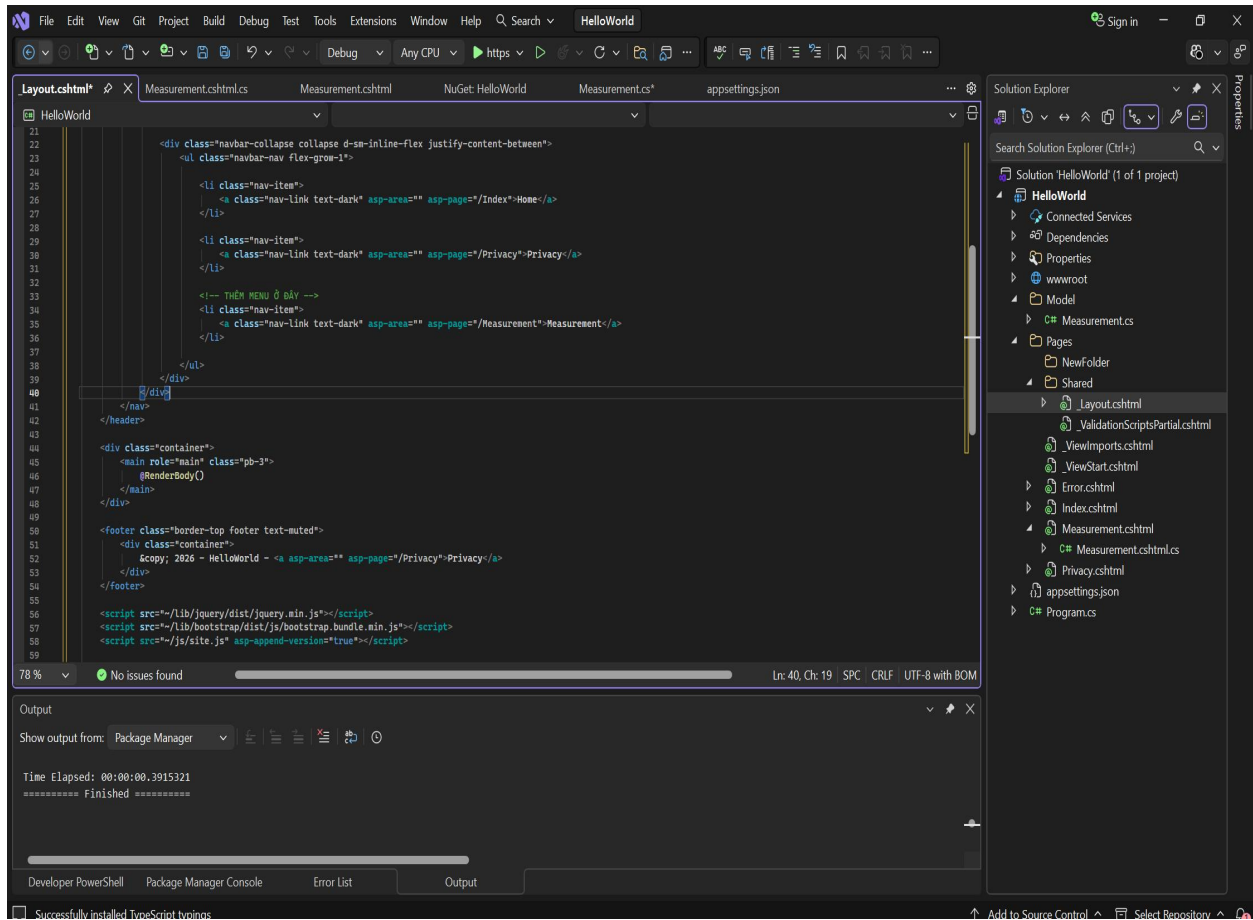

Bước 7: Hiển thị dữ liệu (Frontend)

- Mở file Measurement.cshhtml
- Viết code:

Bước 8: Thêm Menu

- Mở file Pages/Shared/_Layout.cshhtml
- Thêm đoạn sau vào menu:

Bước 9: Chạy chương trình

- Nhấn Ctrl + F5
- Truy cập trang **Measurement**

Kết quả:

- Hiện thị danh sách dữ liệu từ database
- Giao diện hoạt động đúng

Welcome

Learn about [building Web apps with ASP.NET Core](#).

Measurement List

ID	Name	Unit
1	Temperature	C
2	Weight	Kg
3	Length	Meter

BÀI 2:

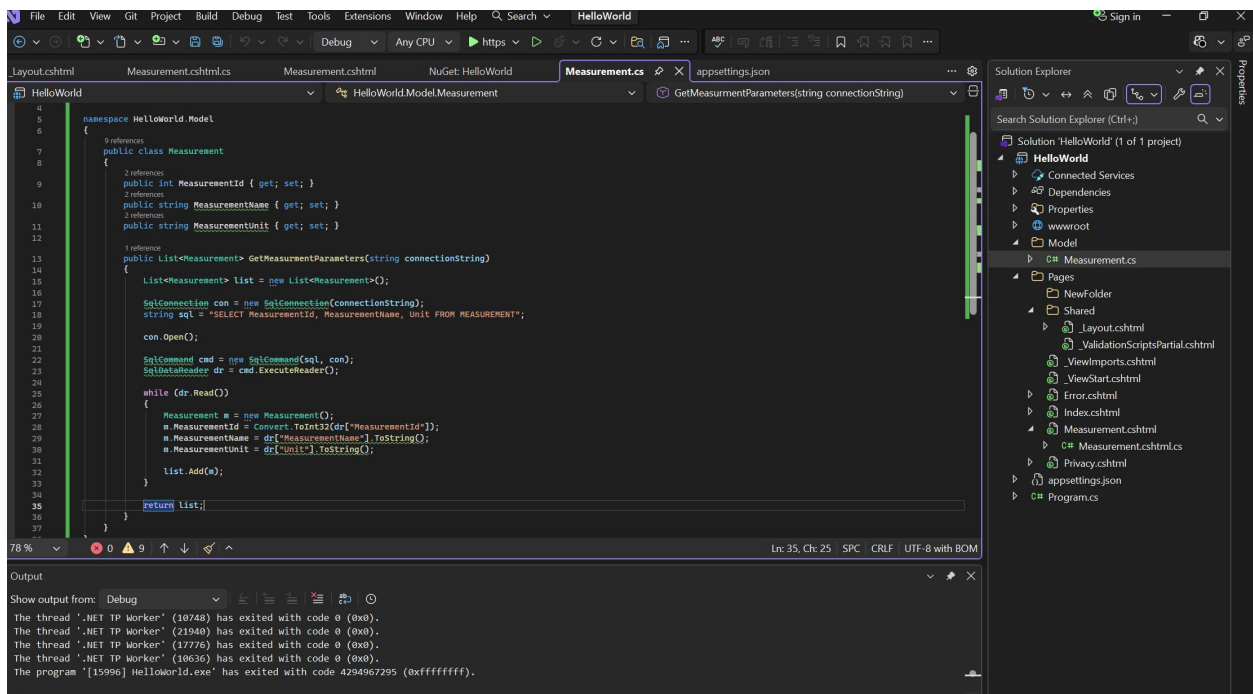

BƯỚC 1: SỬA MODEL (THÊM CRUD)

Mở file:

Model/Measurement.cs

Thêm các hàm dưới vào **dưới hàm cũ**

1. HÀM INSERT (THÊM)
2. HÀM DELETE
3. HÀM UPDATE

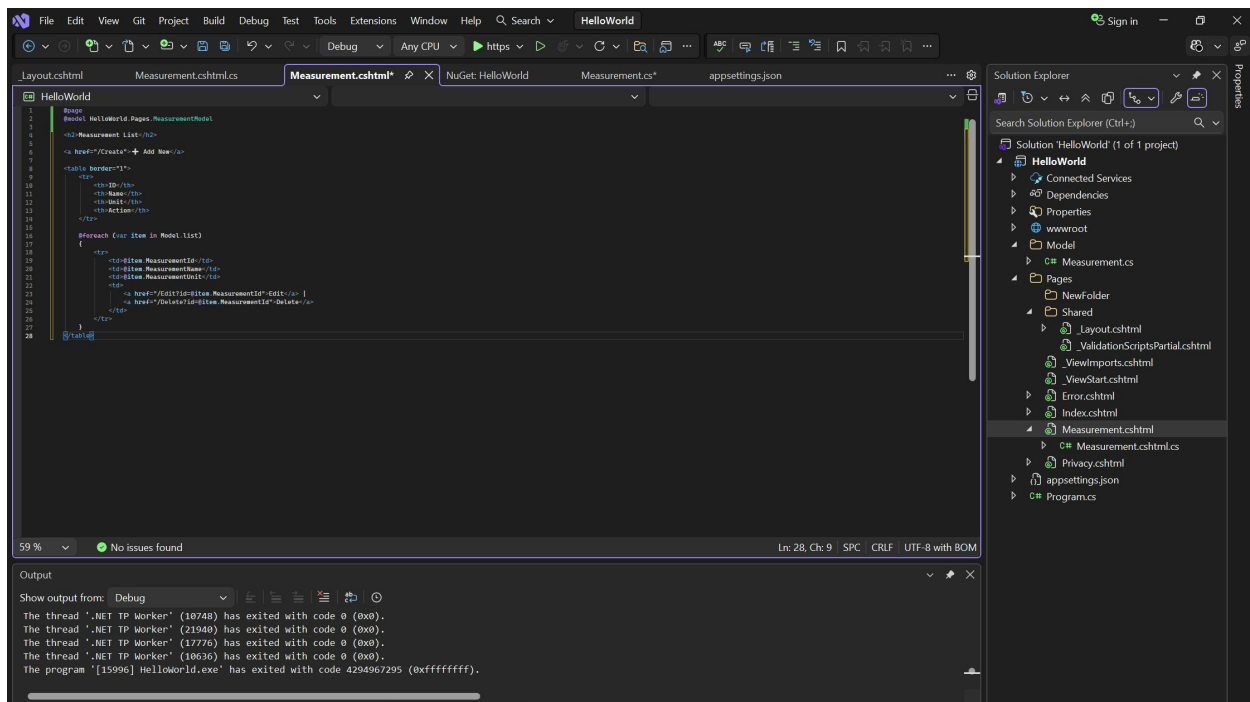

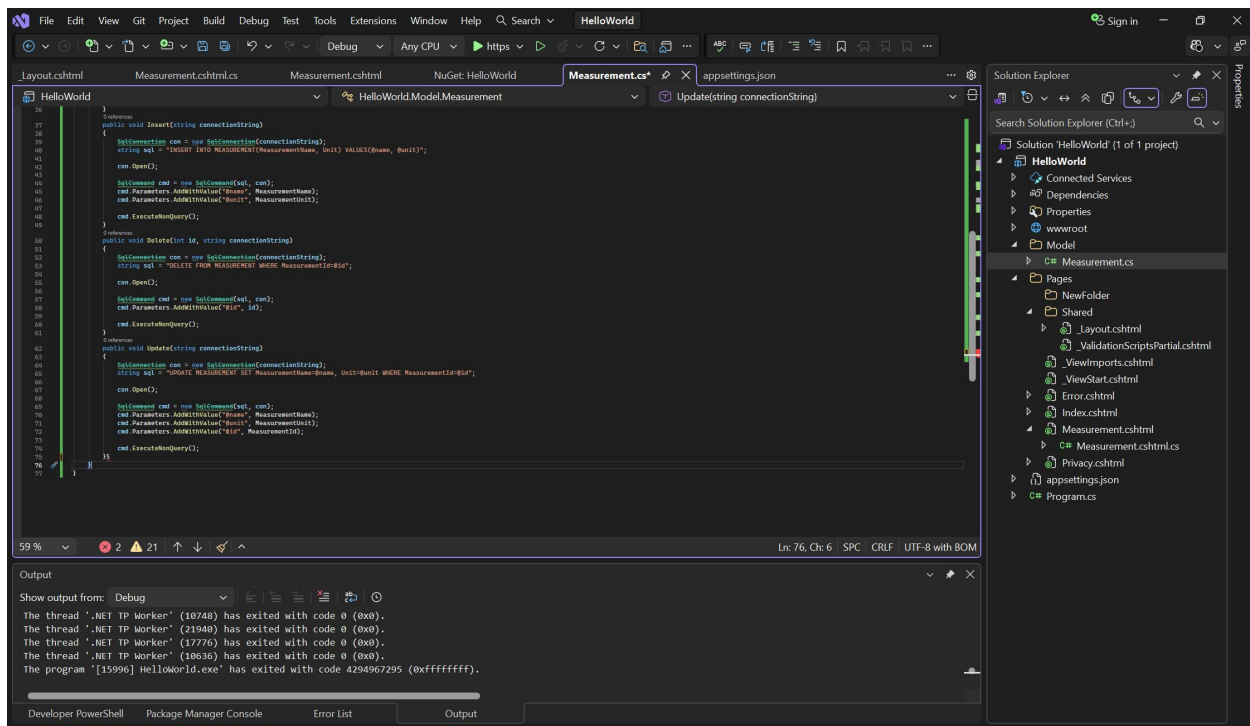

```
4 namespace HelloWorld.Model
5 {
6     9 references
7     public class Measurement
8     {
9         2 references
10        public int MeasurementId { get; set; }
11        2 references
12        public string MeasurementName { get; set; }
13        2 references
14        public string MeasurementUnit { get; set; }
15    }
16    1 reference
17    public List<Measurement> GetMeasurementParameters(string connectionString)
18    {
19        List<Measurement> list = new List<Measurement>();
20        SqlConnection con = new SqlConnection(connectionString);
21        string sql = "SELECT MeasurementId, MeasurementName, Unit FROM MEASUREMENT";
22        con.Open();
23        SqlCommand cmd = new SqlCommand(sql, con);
24        SqlDataReader dr = cmd.ExecuteReader();
25        while (dr.Read())
26        {
27            Measurement m = new Measurement();
28            m.MeasurementId = Convert.ToInt32(dr["MeasurementId"]);
29            m.MeasurementName = dr["MeasurementName"].ToString();
30            m.MeasurementUnit = dr["Unit"].ToString();
31            list.Add(m);
32        }
33        return list;
34    }
35 }
```

BƯỚC 2: SỬA TRANG Measurement (THÊM NÚT)

🔗 Mở:

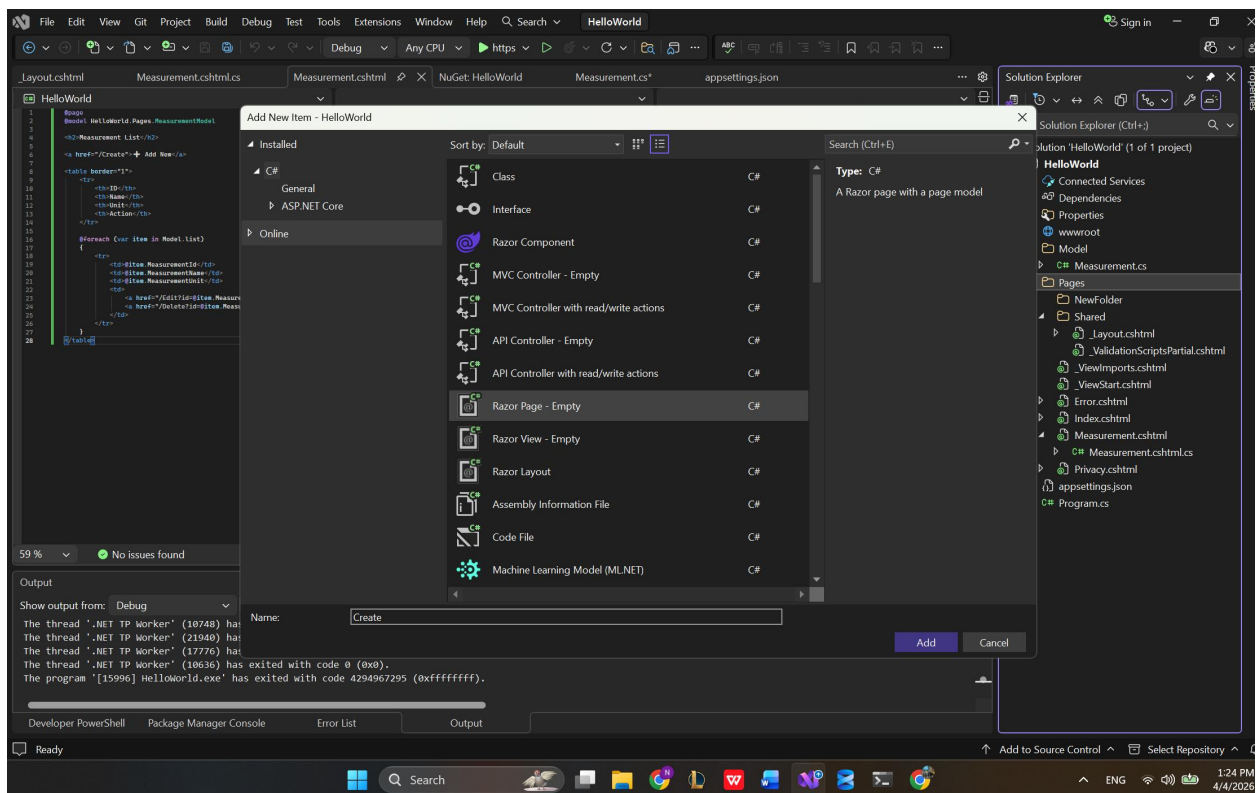

Measurement.cshtml

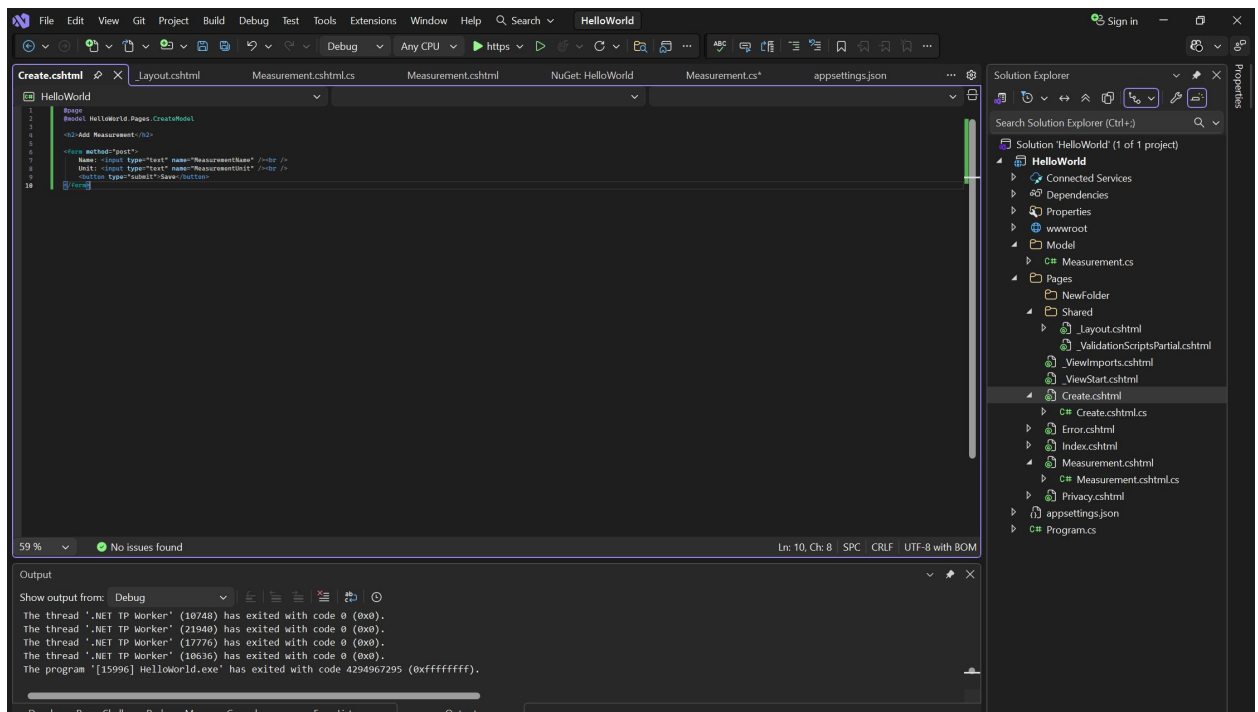

BƯỚC 3: TẠO TRANG CREATE

◆ 1. Tạo file

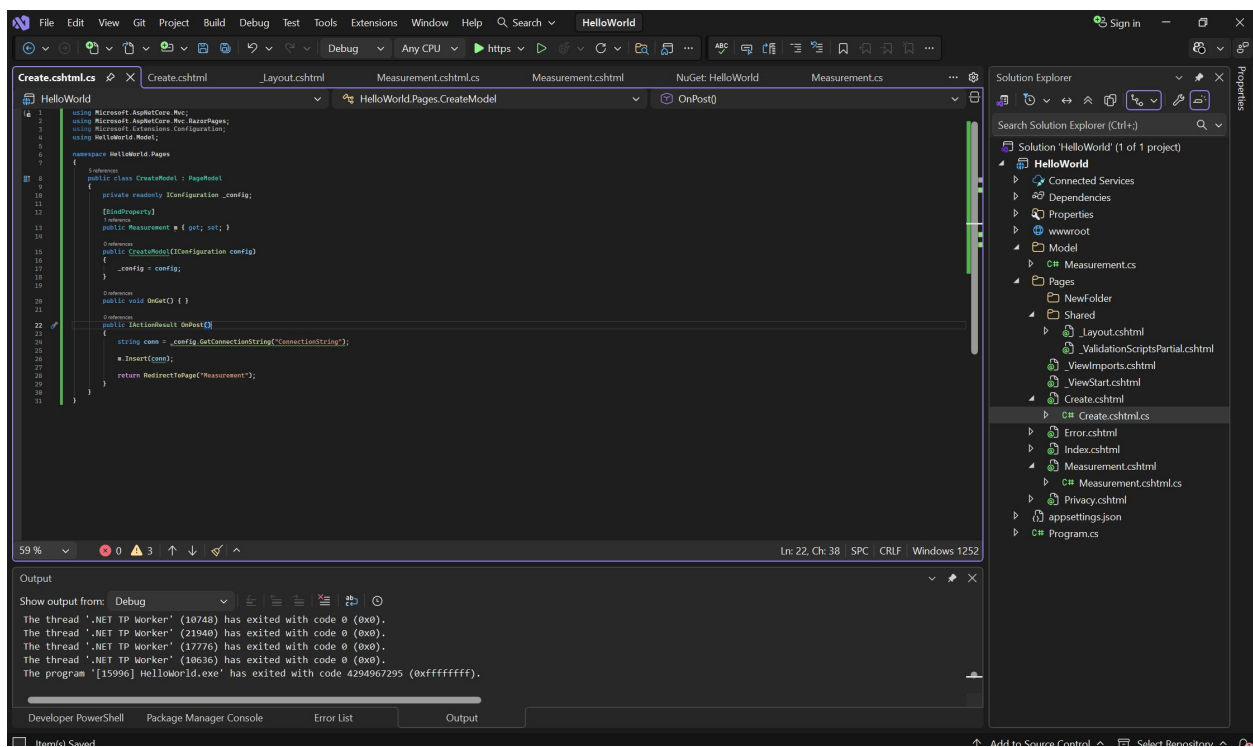

- Chuột phải Pages → Add → Razor Page
Tên: Create

2. Code Create.cshtml

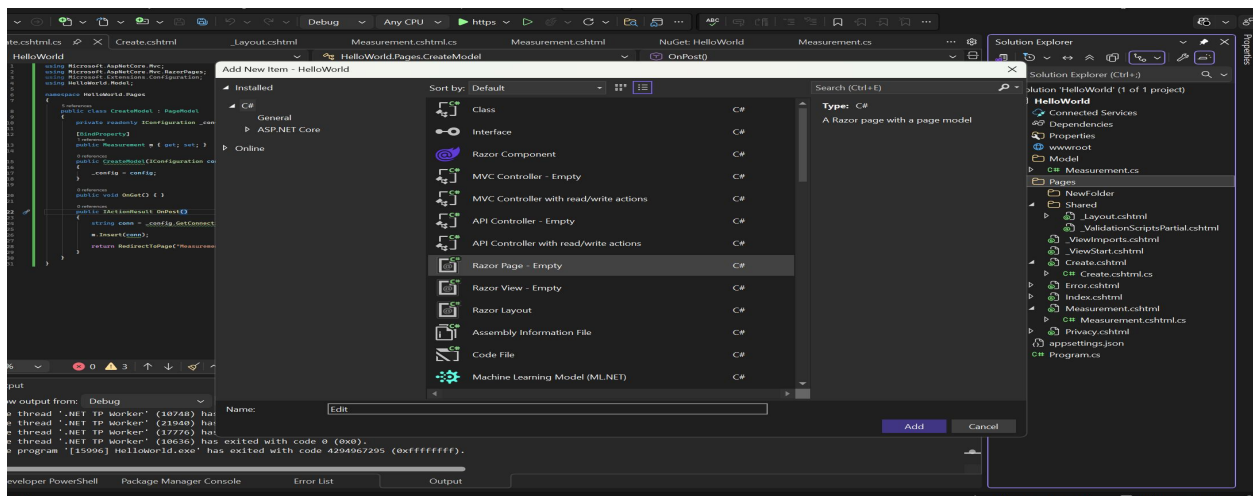

3. Code Create.cshtml.cs

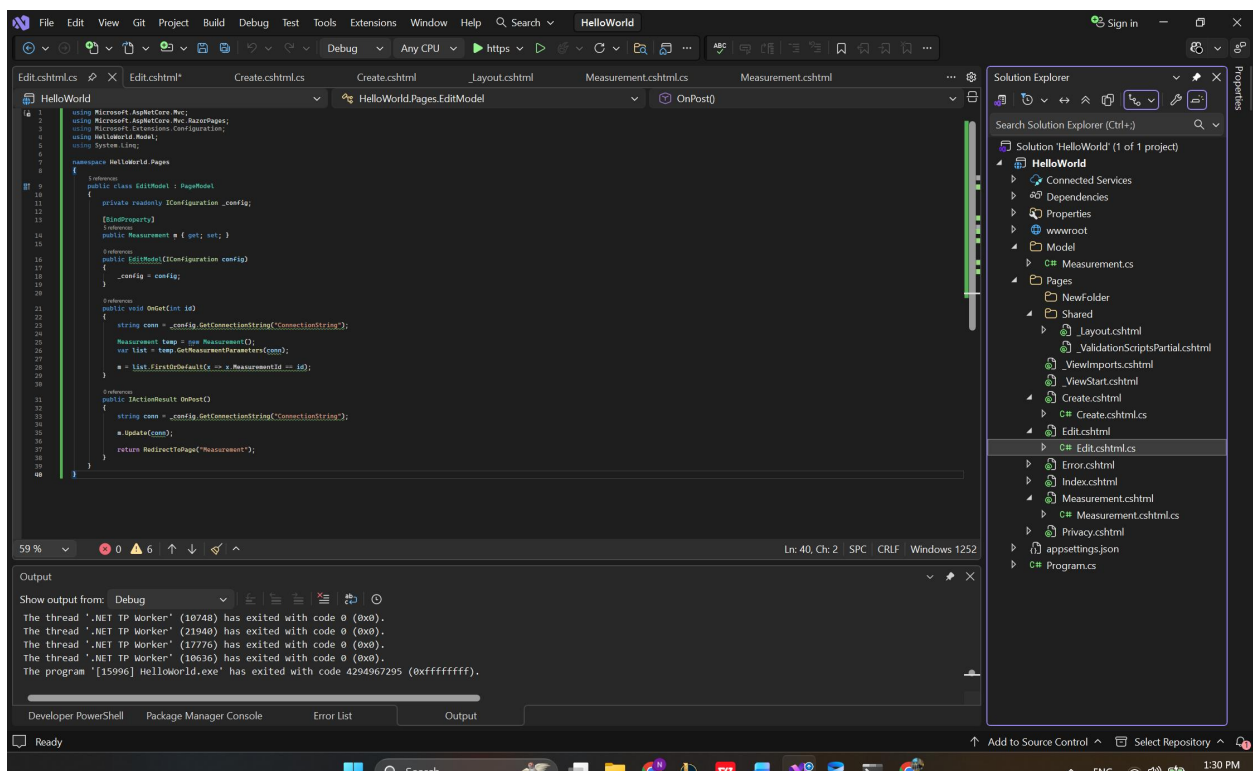

BƯỚC 4: TẠO EDIT

✦ Tạo Razor Page: Edit

✦ Edit.cshtml

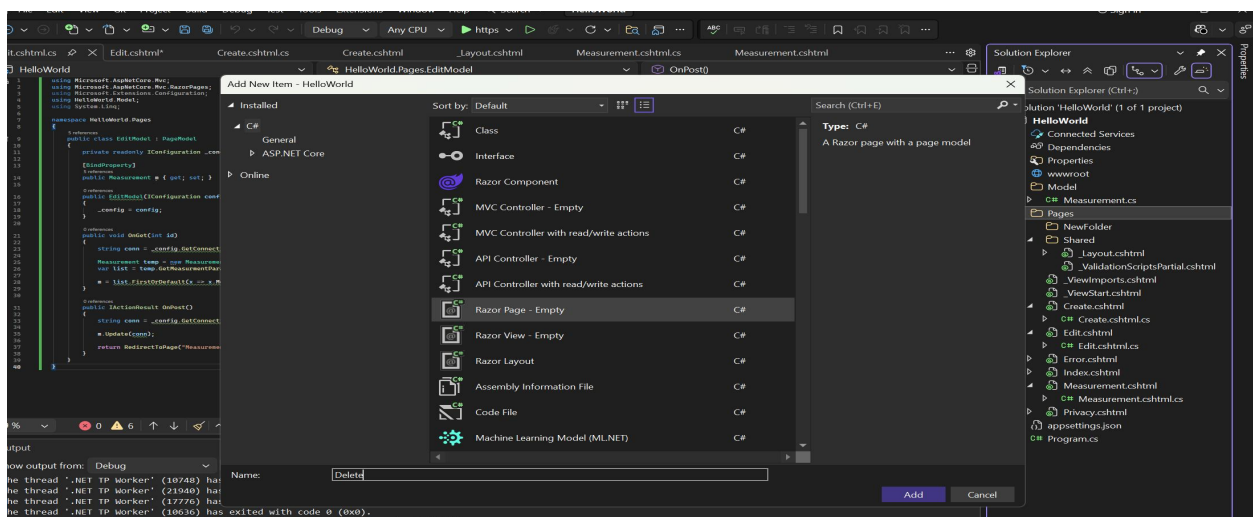

Edit.cshtml.cs

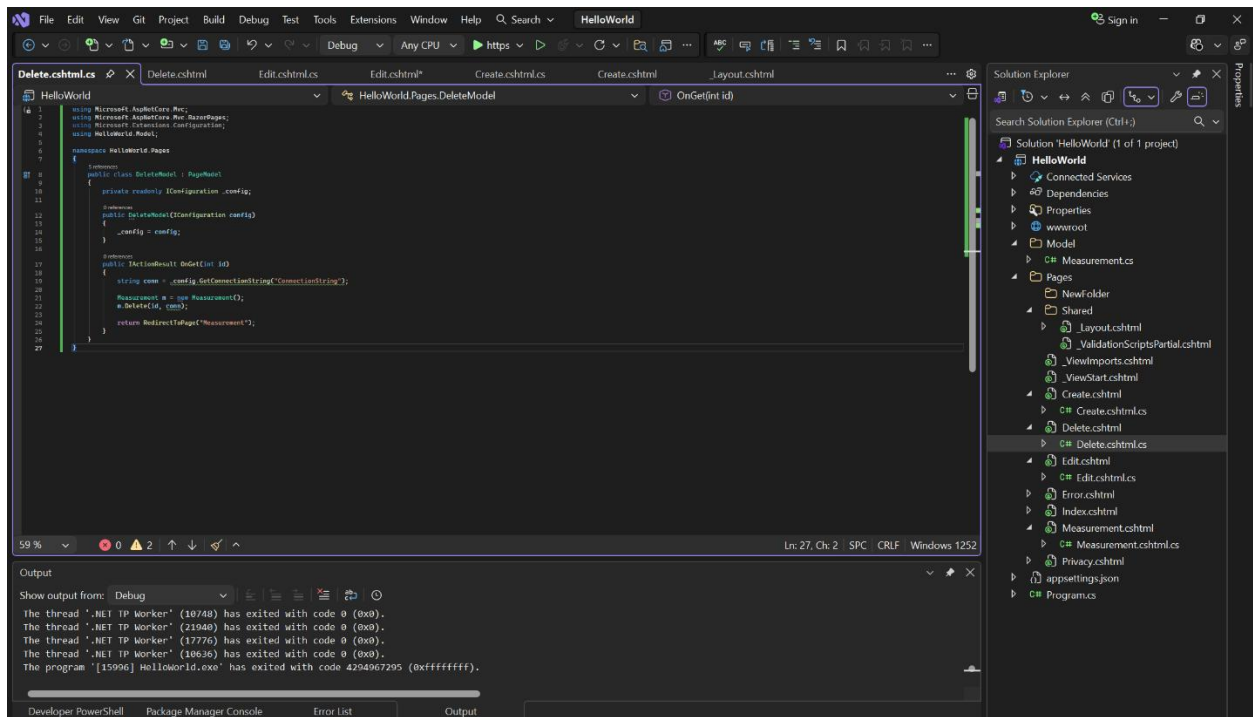

BƯỚC 5: TẠO DELETE

◆ Tạo Razor Page: Delete

◆ Delete.cshtml.cs

BUỐC 6:

CHẠY
